

reflections™

Introducing the newest look in decorative concrete for 2007. This modern design utilizes light, shadow and perspective to create concrete effects like we have never seen before.

The Reflections pattern is a series of hourglass shaped bulls eye's with opposing radius' adjacent to each other. Within the pattern, the outside edge of each individual ring and partial ring has an apex of 1/8" and tapers down to zero into the neighboring edge of the next ring.

As our world revolves you will see different aspects of light and shadow amongst this playful design.

It is typical to use a liquid release agent with this pattern as it requires one color only. If a texture is desired we recommend giving a sand finish to the imprinted surface.
